

Is total energy intake associated with adiposity in children? (DGAC 2010)

Conclusion

Moderately strong evidence from recent prospective cohort studies that identified plausible reports of energy intake, support a positive association between total energy (caloric) intake and adiposity in children.

Grade: Moderate-Strong

Overall strength of the available supporting evidence: Strong; Moderate; Limited; Expert Opinion Only; Grade not assignable For additional information regarding how to interpret grades, [click here](#).
